

O₂/N₂ measurements in the ICOS network

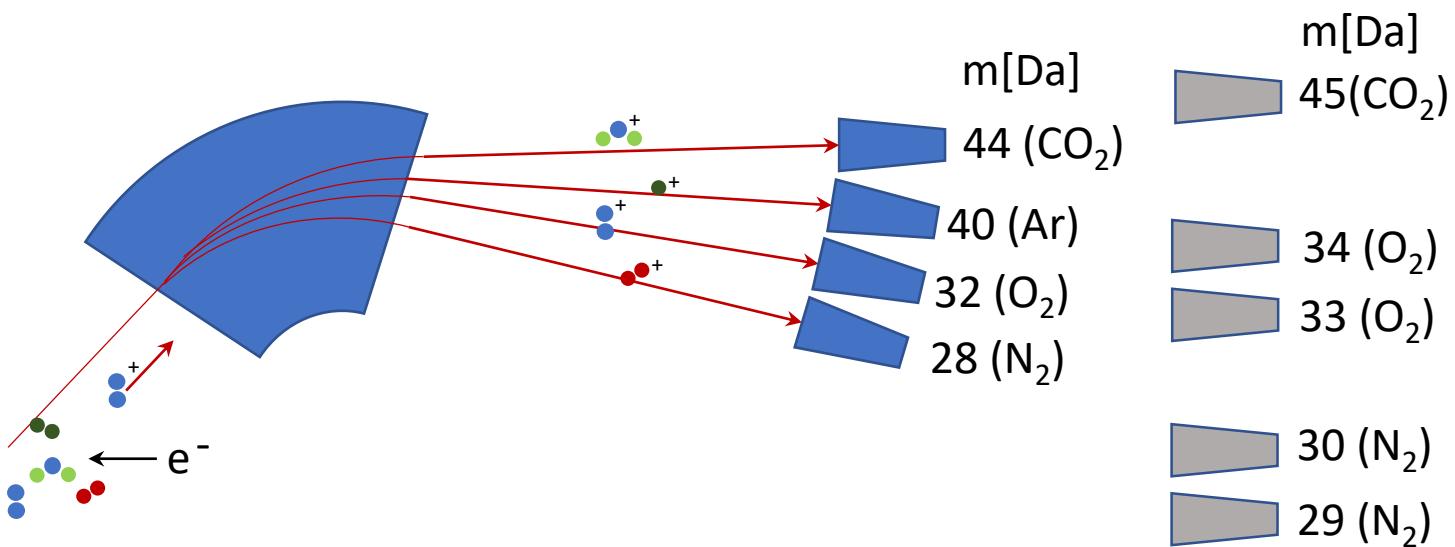

Markus Eritt, Richard Kneißl, Lars
Borchardt, Martin Strube, Philippa Vestner

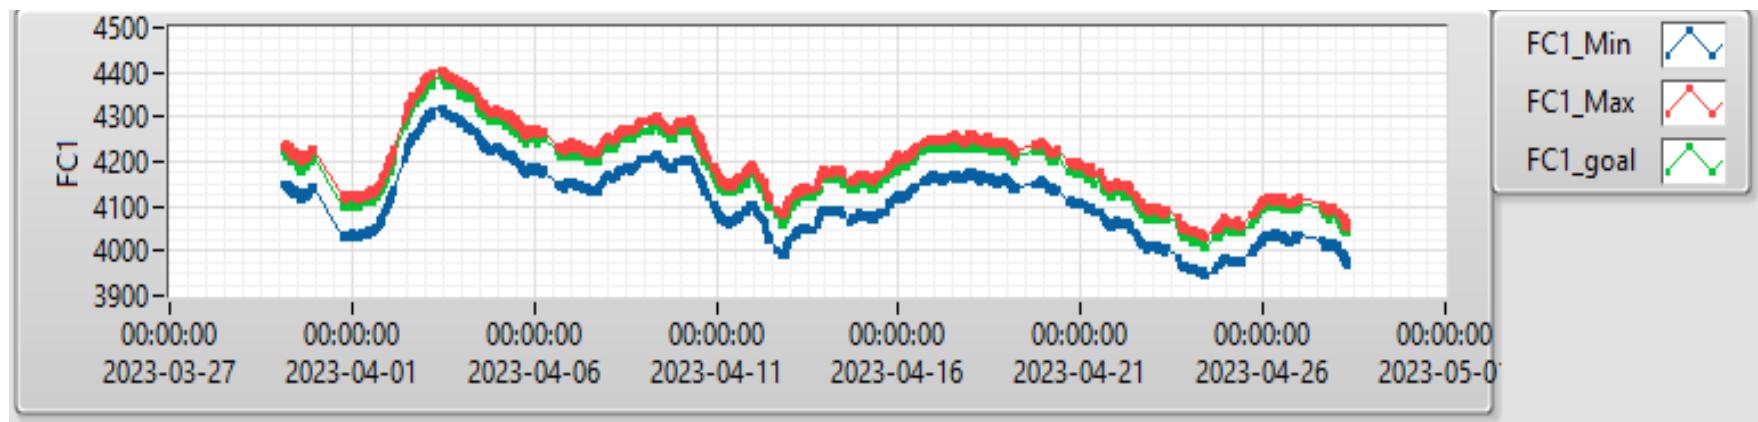

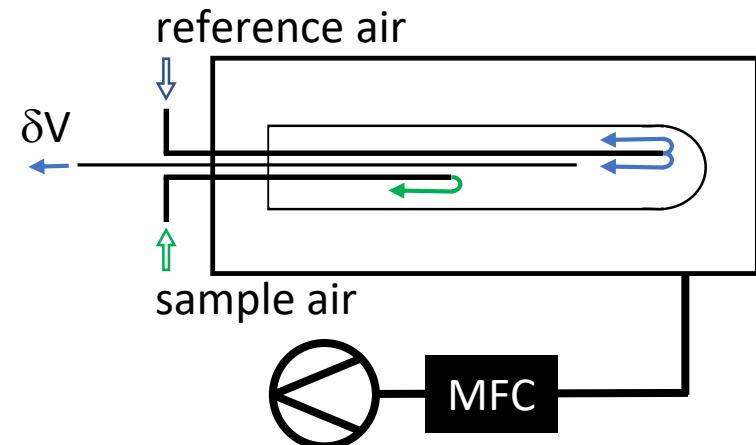

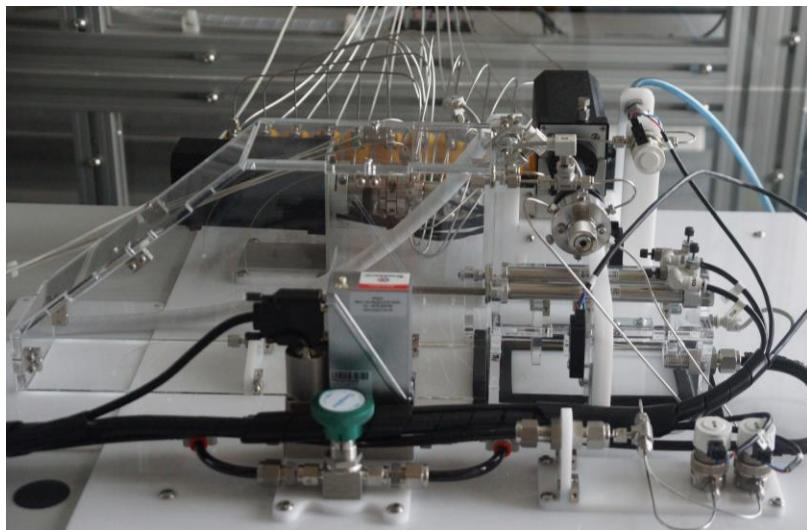

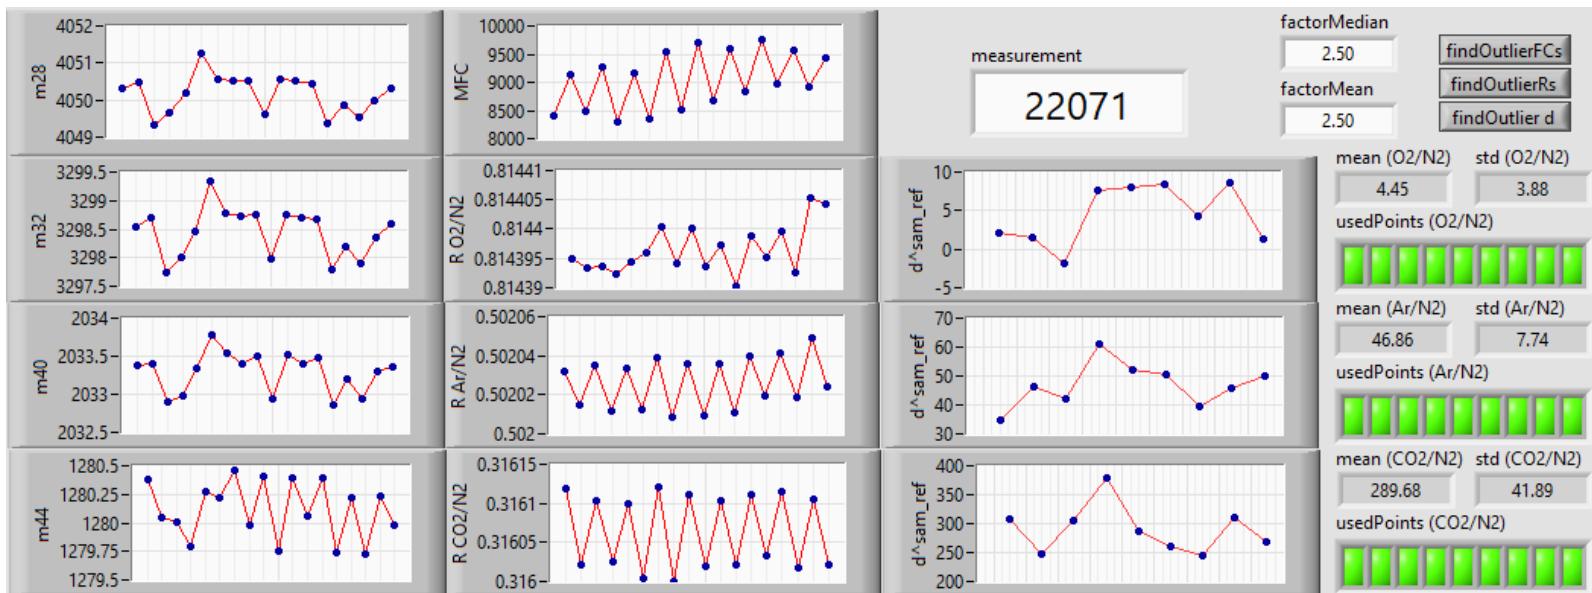

- O₂/N₂ measurements at the ICOS CAL FCL
- flask sampling with T-connection
- humidity and mass spec O₂/N₂ measurements

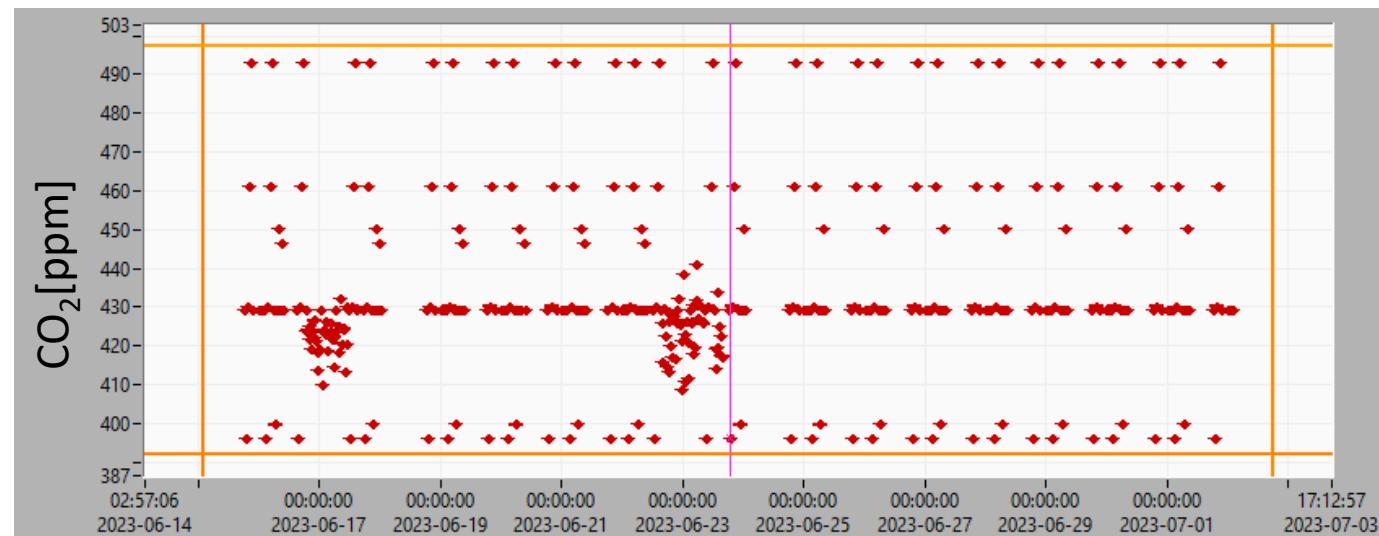

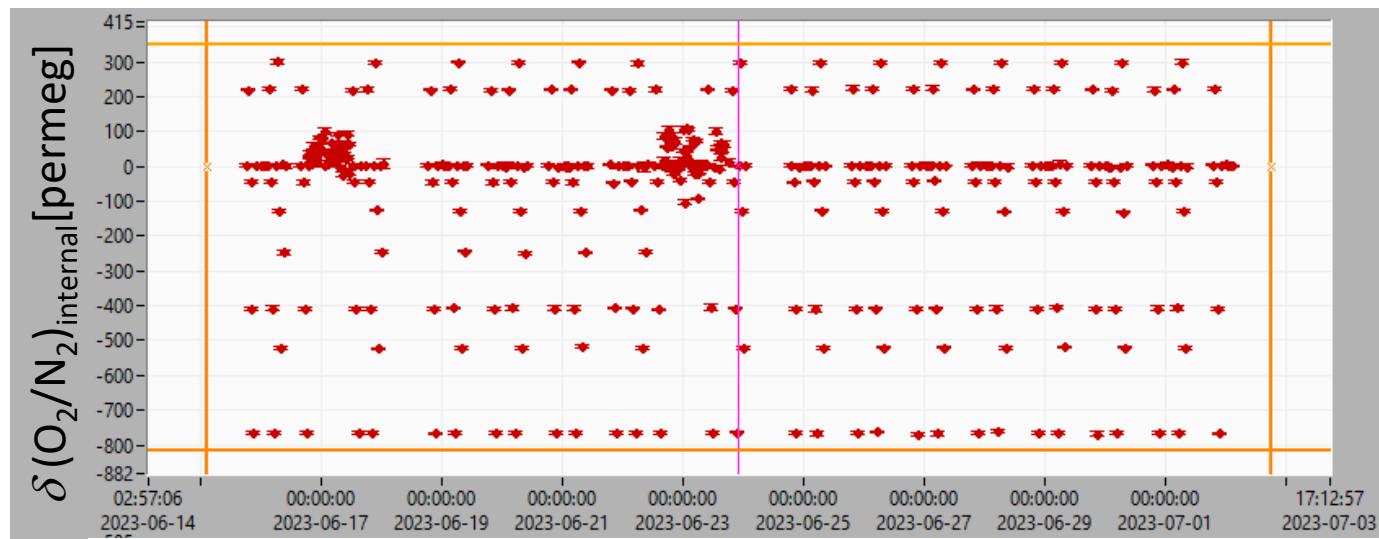

- O₂/N₂ measurements at the ICOS CAL FCL
- flask sampling with T-connection
- humidity and mass spec O₂/N₂ measurements

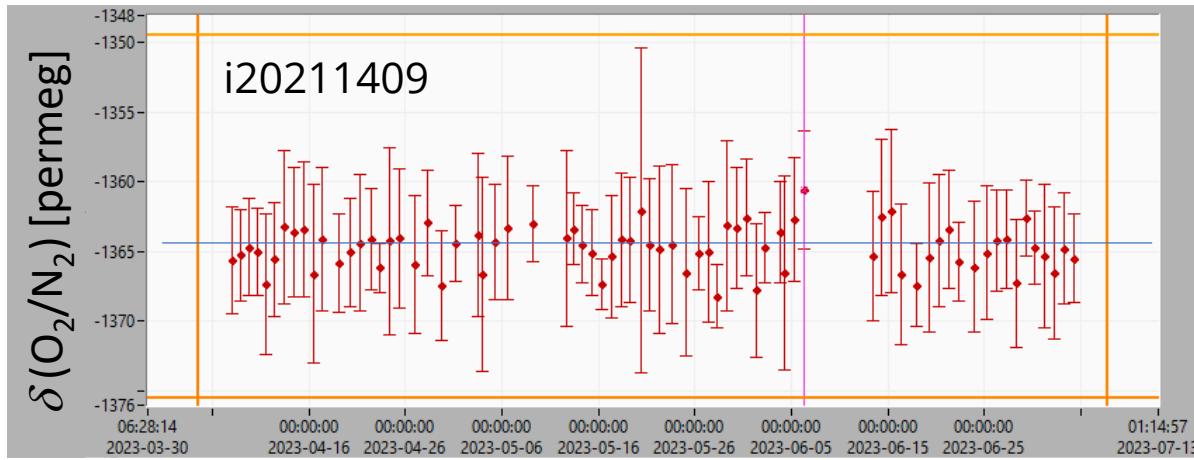

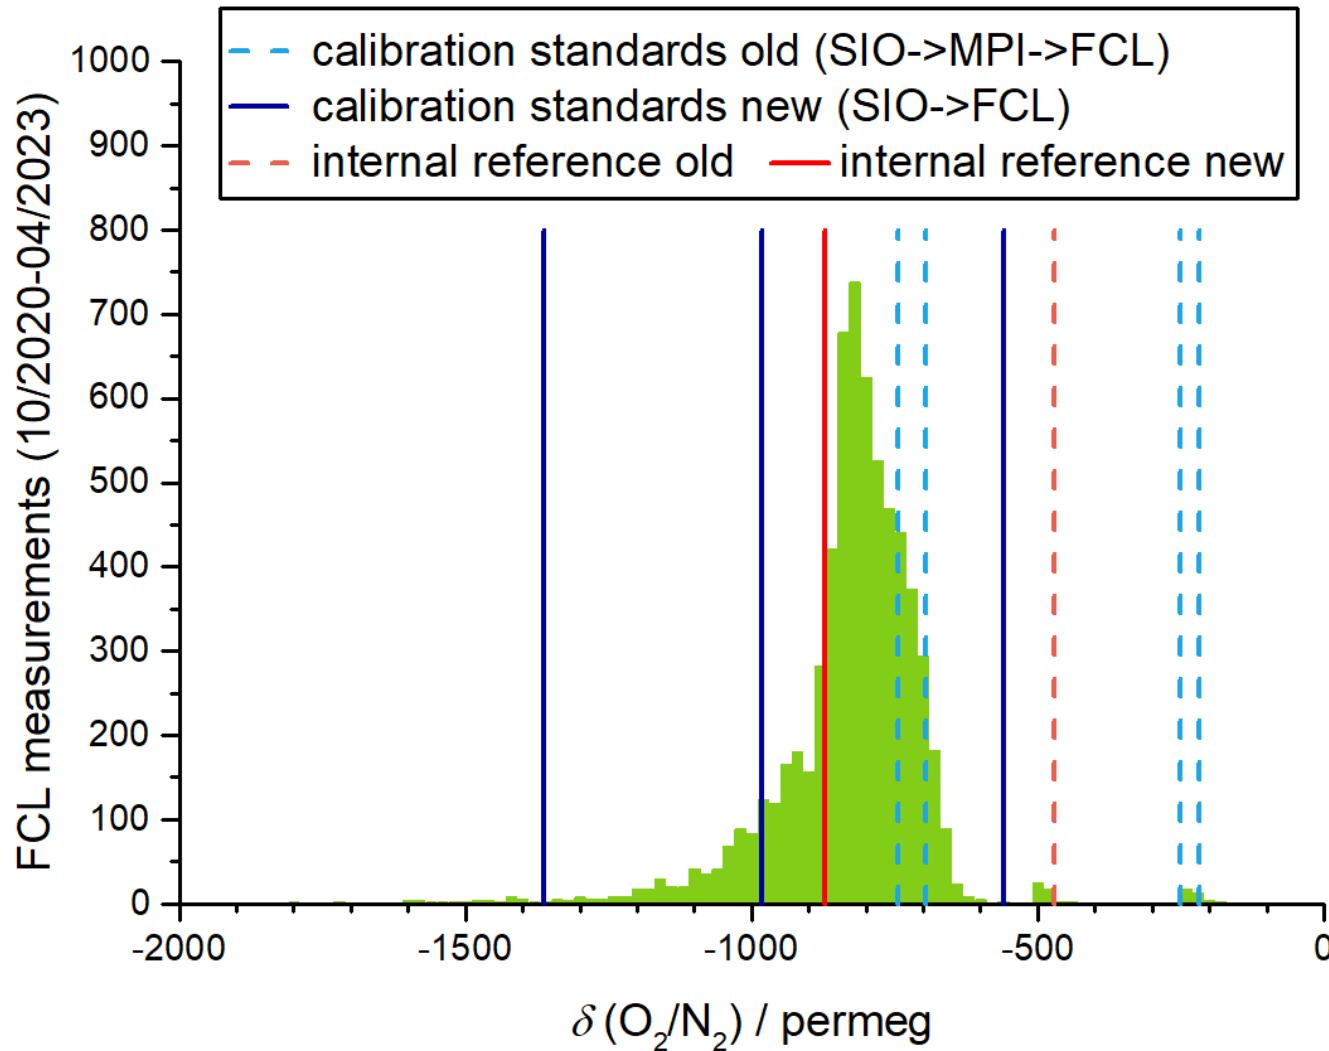

internal reproducibility

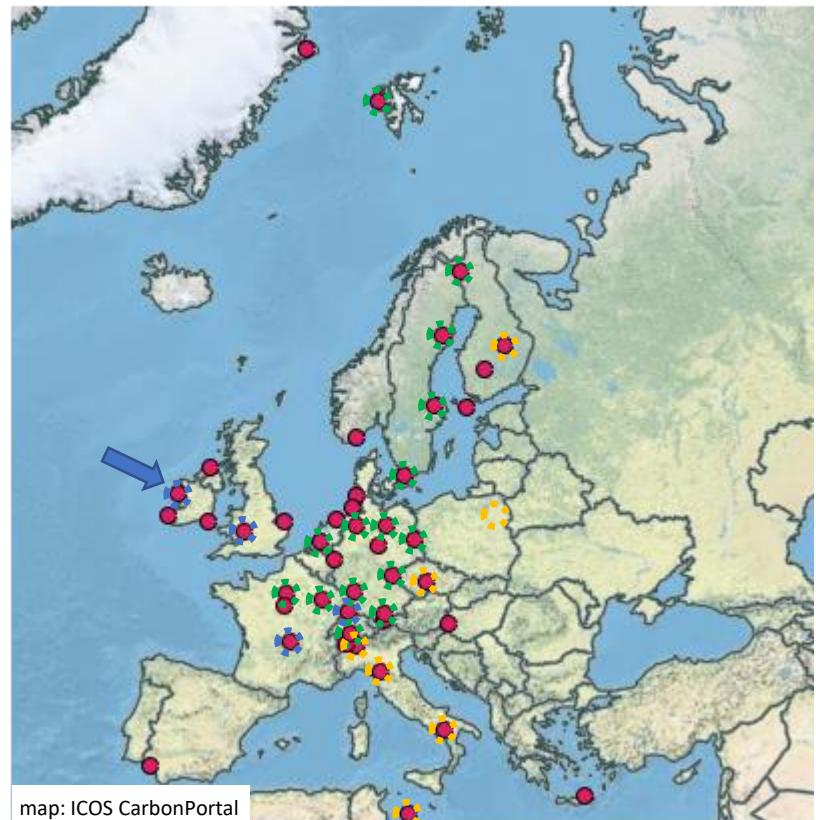

3 SCRIPPS assigned cylinders:
76 measurements (03/2023 -> 07/2023)

		O_2/N_2	Ar/N_2	CO_2
i20211438	D753839	-561.60 ± 1.59	-209.94 ± 3.44	399.77 ± 0.01
i20211413	D752840	-980.32 ± 1.89	-209.47 ± 3.28	429.33 ± 0.01
i20211409	D753841	-1364.76 ± 1.53	-624.19 ± 3.49	450.44 ± 0.01

flask measurements

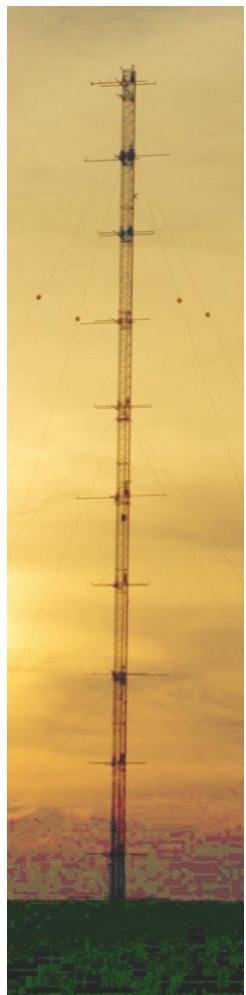

- O₂/N₂ measurements at the ICOS CAL FCL
- flask sampling with T-connection
- humidity and mass spec O₂/N₂ measurements

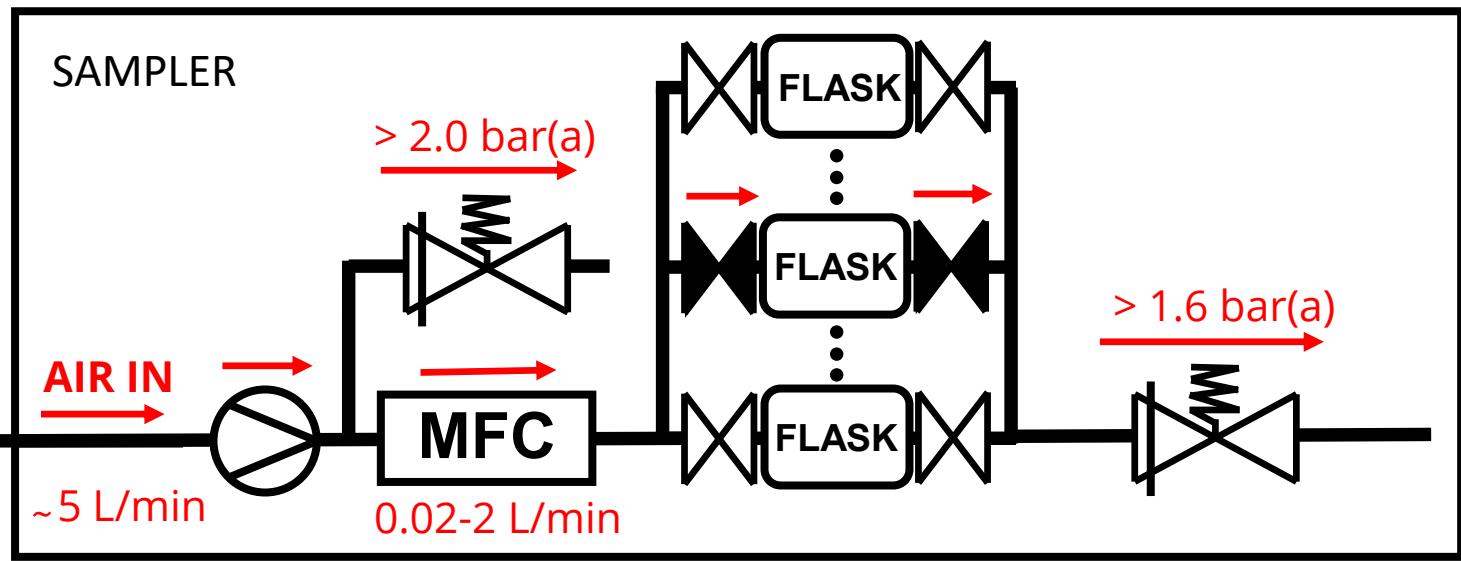

- ICOS Atmosphere Stations
- ◆ Flasksampler taking samples
- Flasksampler to be installed
- Flasksampler in production

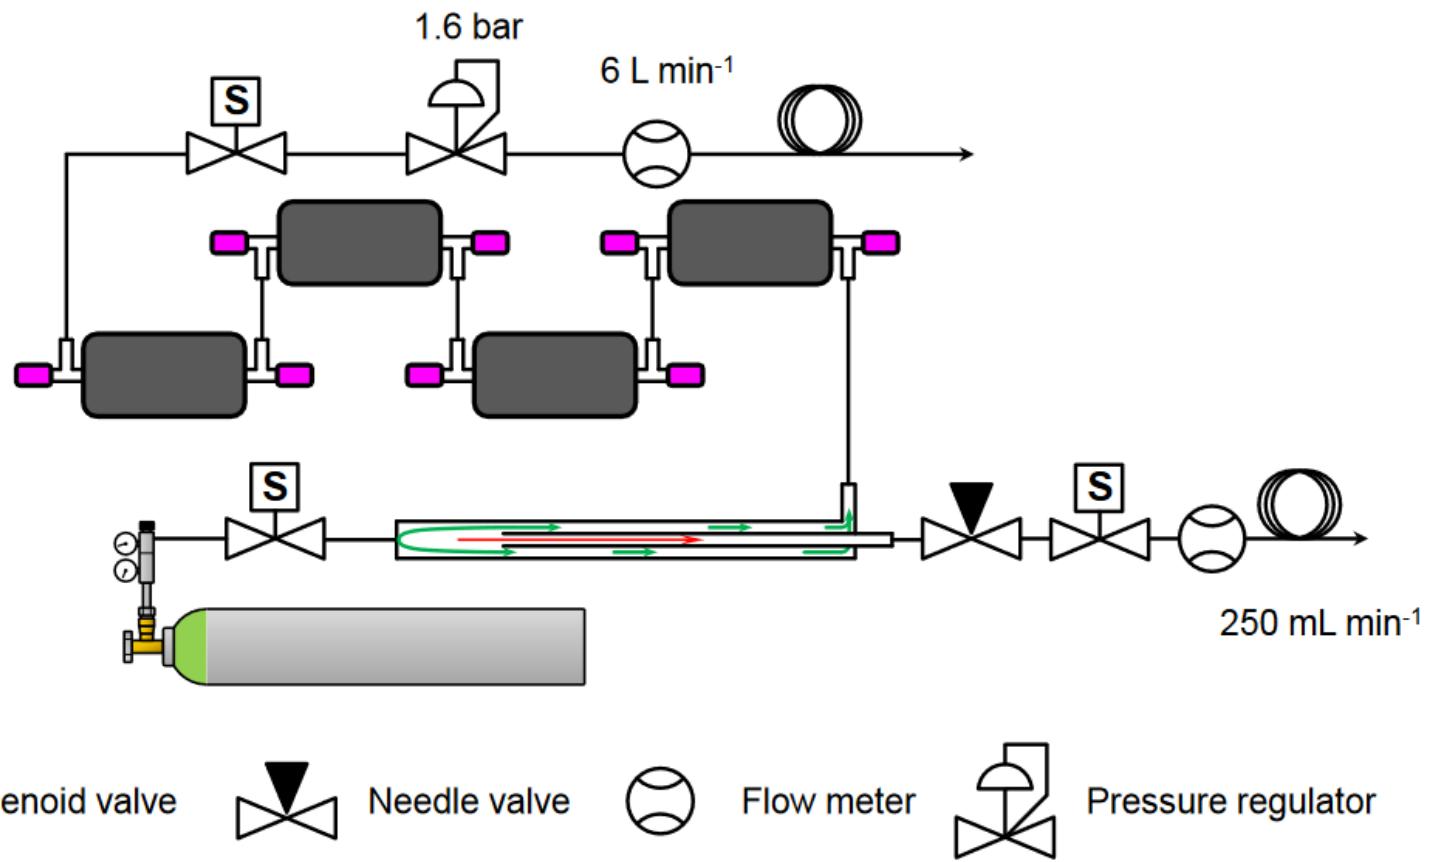

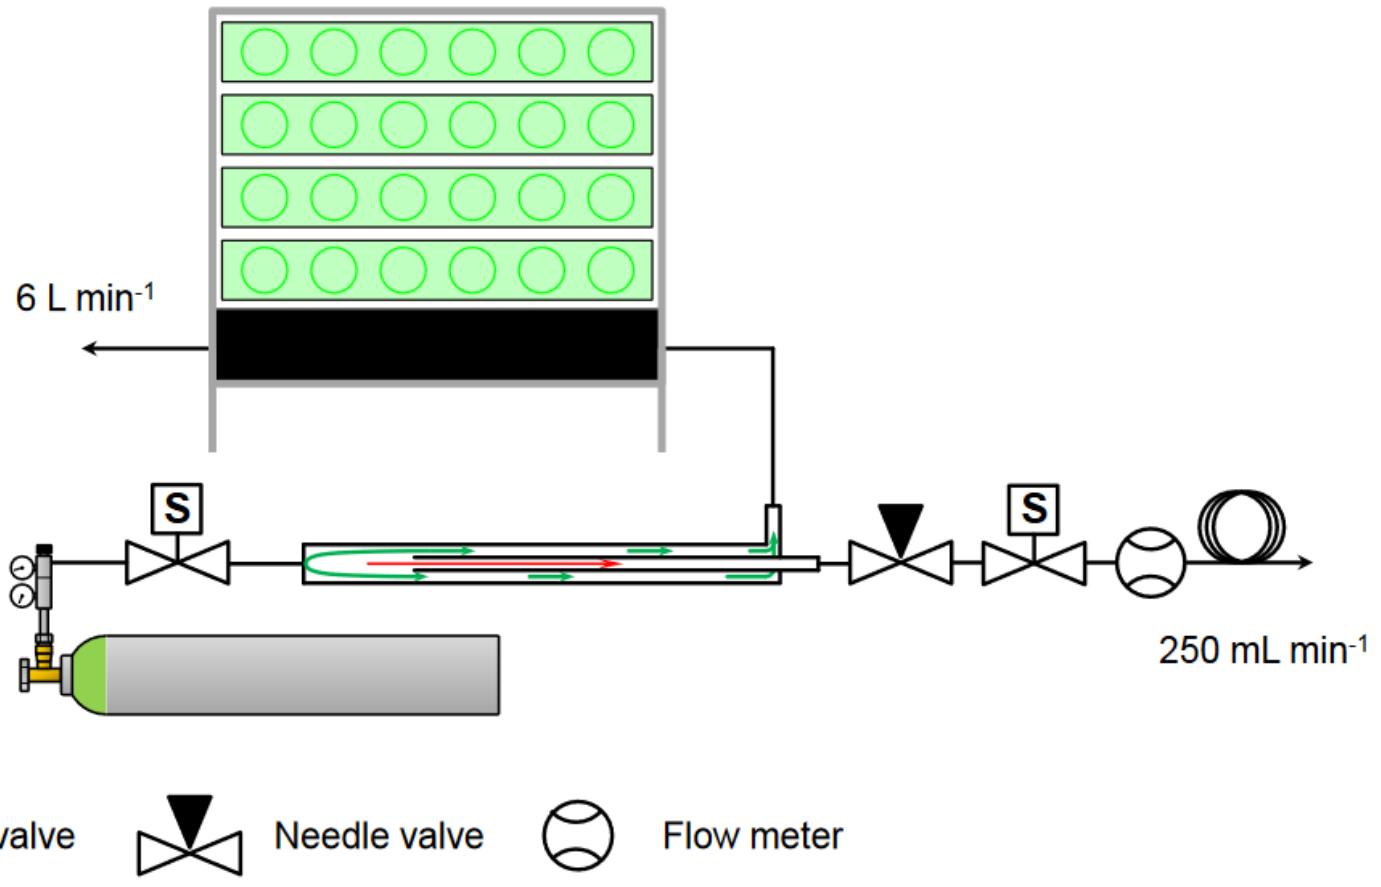

plot shows flasksampling with constant weight over one hour

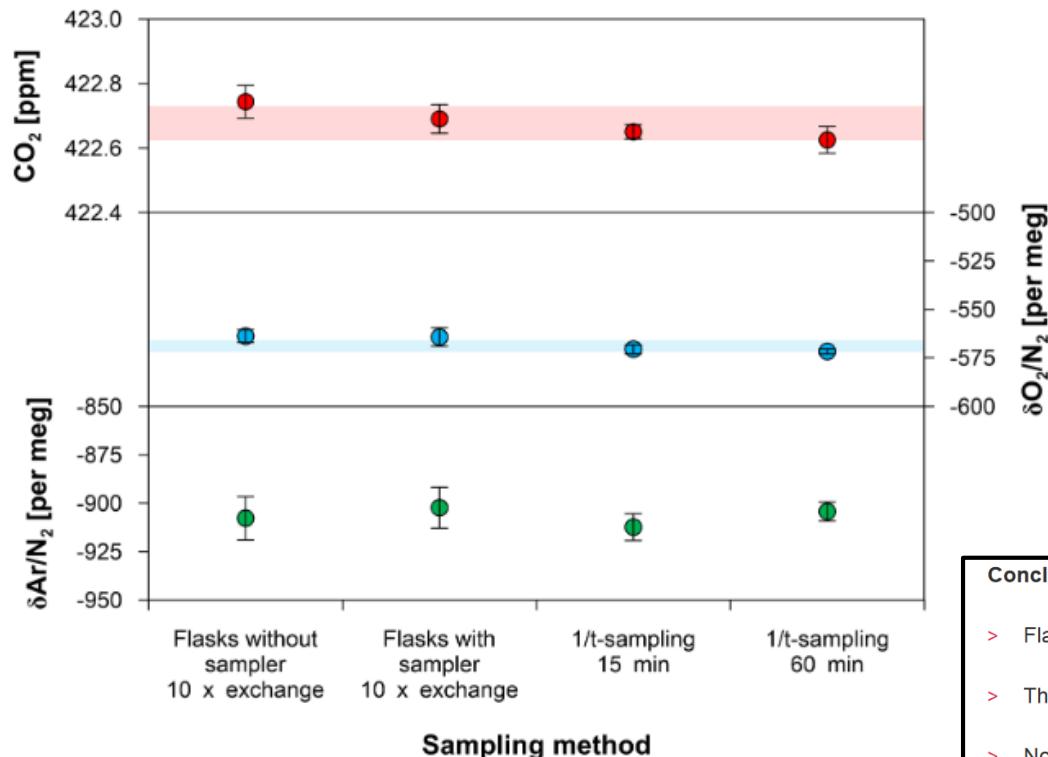

Measurement setup without flask sampler

Measurement setup with flask sampler

Summary

	$\text{CO}_2 \text{ [ppm]}$	$\delta\text{O}_2/\text{N}_2 \text{ [per meg]}$	$\delta\text{Ar}/\text{N}_2 \text{ [per meg]}$
Flasks without sampler (10 x exchange)	422.74 ± 0.05	-563.8. ± 3.2	-907.8 ± 11.1
Flasks with sampler (10 x exchange)	422.69 ± 0.04	-564.3 ± 4.8	-902.3 ± 10.5
Flasks with sampler 1/t 15 min	422.65 ± 0.02	-570.7 ± 2.4	-912.4 ± 6.9
Flasks with sampler 1/t 60 min	422.63 ± 0.04	-571.8 ± 1.3	-904.3 ± 4.9

Conclusions

- > Flask sampler seems to perform well in Bern
- > The 24 sampling ports yield similar results
- > No obvious fractionations of CO_2 , O_2 or Ar with either of the sampling methods were observed
- > Only one single gas was used for tests

- O₂/N₂ measurements at the ICOS CAL FCL
- flask sampling with T-connection
- **humidity and mass spec O₂/N₂ measurements**

what is the influence?

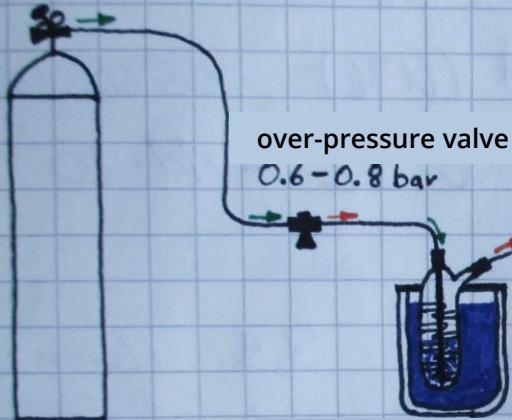

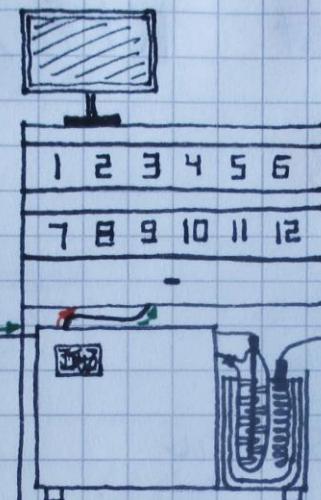

schematic setup

fillcylinder with regulator

i20220686 mit TES4-003

oder

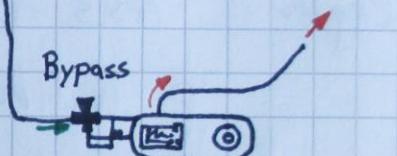

i20200303 mit TES1-018

humidification
 $T \approx +5^\circ\text{C}$ 

Air Dryer

Flask Sampler 0020
air exchange (const. flow)
exchange factor: 20
flow: 3.8 - 4.0 L/min

external cooler
to set the
respective
dew point

dewpoint mirror
58000 RS
-20°C bis -50°C
in -5°C - steps
flow $\approx 600 - 900 \text{ m}^3/\text{min}$
